NABP VERIFY

Monitoring service supporting member boards' license verification needs

NABP Verify is a license monitoring program created to assist boards of pharmacy as they seek new ways to regulate pharmacies and pharmacists who are playing an ever-increasing role in the health care system. For example, NABP Verify can provide oversight of out-of-state pharmacists practicing via an interstate practice model. This new program is meant to decrease administrative burden while maintaining and possibly increasing, patient safety through ongoing monitoring for discipline and licensure status.

NABP Verify enables boards to:

- Allow for the issuance of state credentials based upon continued evidence of ongoing licensure in good standing, with little impact on their staff resources.
- Define state-specific practice authority via statutory, regulatory, or policy reference utilizing the issued Verify credential.
    - Practice outside of these references would exceed the credential authority and require full licensure in that state.
- Enable or expand board oversight of existing or innovative new nonresident practice models.
    - Verify program does not serve as an alternative to state licensure, either by examination or via endorsement, for in-person practice within a state.

Boards that wish to recognize NABP Verify in their state will sign a memorandum of understanding that specifies the responsibilities of NABP and the boards.

Benefits of NABP Verify for the Boards:

Reduces administrative burden on board staff to verify license status

Provides a system for continuous monitoring of license status across all states

State-specific credential issued which has authority defined within statutes, regulations, or policies

Provides member boards with insight and oversight on interstate practitioners
